

SYSTEM AND METHOD FOR SAVING USER-SPECIFIED
VIEWS OF INTERNET WEB PAGE DISPLAYS

ABSTRACT OF THE DISCLOSURE

A display system having a display screen to display web pages accessible via a network is provided. The display system comprises a computer system structured to send requests for web pages via the network to a web site, and the computer system receives the web pages via the network. A display area displays the web pages received by the computer system. The display system includes display area controls that allow a user to select a characteristic of the web pages to display in the display area. User-specified settings associated with the displayed characteristic of the web pages are stored in a storage area for subsequent recall and automatic execution whenever a subsequent request for the web pages is sent to the network. The display area displays the user-selected characteristic of the web pages in response to these subsequent requests.
